Patent No. 6906292
GENERAL INFORMATION:
APPLICANT: Sun, Lee-Hwei K
APPLICANT: Sun, Bill N
APPLICANT: Sun, Cecily R
TITLE OF INVENTION: Increased biological
TITLE OF INVENTION: activities
TITLE OF INVENTION: activities
TITLE OF INVENTION: activities
CURRENT APPLICATION UNMER: US/09/932,812A
CURRENT APPLICATION UNMER: 2001-08-17
NUMBER OF SEQ ID NOS: 28
SOFTWARE: Patentin version 3.1
SEQ ID NO 26
TANDER: 202

Sequence 3, Application US/08784512 Patent No. 5872209 GENERAL INFORMATION: APPLICANT: BARTNIK, Eckart APPLICANT: BIDENWIELLER, Bernd APPLICANT: BUETTWER, Frank

```
APPLICANT: HUGHES, Clare
TITLE OF INVENTION: An artificial recombinant substrate (rAGG 1)
TITLE OF INVENTION: and native aggreean to study the proteolytic activity of
TITLE OF INVENTION: "Aggrecanase" in cell culture systems
NUMBER OF SEQUENCES: 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 NWYVDGVEVHNVKTKPREEQYNSTYRVVSVLTVLHQNWMNGKEYKCKVSNKALPAPIEKT 120

New fusion molecules comprising polypeptide sequences that bind to IgG inhibitory receptor and native IgE receptor, useful for treating IgE-mediated hypersensitivity reactions, e.g. asthma or allergies, or autoimmune diseases.

Claim 19; Fig 3; 116pp; English.

The present invention relates to a fusion molecule comprising a first polypoptide sequence capable of specific binding to a native Igd inhibitory receptor consisting of an immune receptor tyrosine-based inhibitory motif (ITIM), expressed on mast cells, basophils or B cells, functionally connected to a second polypoptide sequence capable of specific binding directly or indirectly to a native IgE receptor (FeepsilonR). Also provided are nucleotide sequences encoding such a

              inhibitory receptor consisting of an immune receptor tyrosine-based inhibitory motif (ITIM), expressed on mast cells, basophils or B cells, functionally connected to a second polypeptide sequence capable of specific binding directly or indirectly to a mative IGE receptor (FoepsilonR). Also provided are nucleotide sequences encoding such a fusion protein. The fusion molecules and compositions are useful for treating an IGE-mediated biological response, preferably an IGE-mediated hypersensitivity reaction, such as asthma, allergic rhinitis, atopic dermatitis, severe food allergies, chronic urticaria, angloedema or anaphylactic shock; or autoimmune diseases such as rhemmatoid arthritis, type-I diabetes mellitus, or multiple sclerosis, and for preventing or symptoms resulting from, a type I hypersensitivity reaction in a subject receiving immunicherapy. The present sequence is the human IgGI

conjypeptide sequence capable of specific binding to a native Igg inhibitory acceptor consisting of an immune receptor tyrosine-based inhibitory acceptor consisting of an immune receptor tyrosine-based inhibitory mutif (ITIM), expressed on mast cells, basophila or B cells, enctionally connected to a second polypeptide sequence capable of specific binding directly or indirectly to a native IgE receptor (FeepsilonR). Also provided are nucleotide sequences encoding such a fusion protein. The fusion molecules and compositions are useful for treating an IgE-mediated biological response, preferably an IgE-mediated hypersensitivity reaction, such as asthma, allergic rhinitis, atopic dermattis, severe food allergies, chronic uriticaria, angiodedma or anaphylactic shock; or autoimmune diseases such as rheumatoid arthritis, type-I diabetes mellitus, or multiple sclerosis, and for preventing of or symptoms resulting from, a type I hypersensitivity reaction in a conject receiving immunotherapy. The present sequence is a gammahinge-CHGamma2-(CHGamma2-(CHepsilon2-CHepsilon3-CHepsilon3-CHepsilon3 fusion protein (designated GE2) of the invention

                                                                                                                                                                                        This invention relates to a novel MUC1 chimeric protein which comprises a first polypeptide sequence and a second polypeptide sequence, where the first polypeptide sequence is a MUC1 extracellular (MUC1-EC) polypeptide, and the second polypeptide sequence is a human immunoglobulin FC polypeptide or a human albumin polypeptide. The invention may be useful for the development of compounds with a cytostatic activity acting as MUC1 antagonists or CD27 antagonists. The MUC1 chimeric protein is useful in preparing a composition for treating cancer. The present sequence is that of a protein which was used during the development of the novel MUC1 chimeric protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180

the invertion tradece to a mountained religions delected from cesidues 250, 314, and 428 (Kabat numbering) is different from that residues 250, 314, and 428 (Kabat numbering) is different from that comprising an PC residon protein. Also included are an FC fusion protein an actually identical to that of the courring class IgG antibody, a modified FC-fusion protein of the corresponding unmodified FC-fusion protein, a modified than that of the corresponding unmodified FC-fusion protein, a modified than that of the corresponding unmodified FC-fusion protein, a modified to residues 250, 314, and 428 is different from the group consisting of residues 250, 314, and 428 is different from the group consisting of residues 250, 314, and 428 is different from the group consisting of residues 260, 314, an isolated polynucleotide in the unmodified IgG class antibody), an isolated polynucleotide inclacule encoding a polypeptide comprising an esquence at least 90% identical to a sequence selected from ADZ656600-ADZ66556, an isolated comprising at least one amino acid sequence at least 90% identical to a sequence selected from ADZ656600-ADZ66556, an isolated comprising at least one amino acid sequence at least 90% identical to a sequence selected from ADZ656600-ADZ66556, an amino acid sequence at least one amino acid sequence at least from Comprising at least one amino acid residue as cited above, and comprising at least one amino acid residue as cited above, and different from chart present in the FC-fusion protein) and a method of producing a modified FC-fusion protein with an altered binding affinity for protein from protein comprising an enthal and a methor of producing a mitable protein from protein from protein with the unmodified FC-fusion protein an experient comprising an enthal and an enthal and a methor of producing a mitable protein from protein from protein comprising an enthal an altered and enthal and an enthal and a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein (comprising preparing an expression vector comprising a suitable promoter operably linked to DNA encoding at least a constant region of an IgG heavy chain, transforming host cells with the vector and culturing the transformed host cells to produce the modified IgG Fc fusion protein). The modified antibody has a higher affinity for FcRn at pH 6.0 than at pH 8.0. The fusion proteins are useful for studying protein agents. The present sequence represents a human IgG1 heavy chain constant region with an amino acid substitution at residue 250, 314 or 428 (Rabat mumbering, the actual residue that is mutated is covered in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         218
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  278
                                                                                                                                                                                                                                    New modified Fc-fusion protein where at least one amino acid residue from the heavy chain constant region, useful for studying protein function in vitro and in vivo and as potential therapeutic and diagnostic agents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9

A novel recombinant vector has been developed which comprises a nucleotide sequence encoding a fusion protein. The fusion protein comprises three domains joined together in order, from N-terminus to C-terminus, of a first domain comprising a protein of interest, a second domain comprising a hydrophilic spacer and an affinity domain, each domain comprising amino acid residues. The present sequence represents the hinge/For region of human IgG1, used in example 3 of the present invention. The recombinant vector is used for the production of authentic recombinant proteins of interest. The method of the invention is useful for the expression of fusion proteins capable of isolation by affinity chromatography in pro- or eukaryotic cells. This method allows for the efficient cleavage and generation of authentic proteins of interest that do not contain extraneous (i.e. non-naturally occurring) amino acids
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence was used in the production of AGP-1 fusion proteins. AGP-1 is a type II transmembrane protein. The fusion proteins comprise an Pc immunoglobulin region fused to the N-terminal portion of the AGP-1 and protein. The fusion proteins can be used to induce apoptosis in a tissue, and to treat proliferative disorders, immune disorders, or virally-breast, prosites. The proliferative disorders include cancers, such as breast, prostate, lung or colon cancer. The viral infections include hepatitis, and acquired immunodeficiency syndrome (AIDS), and the immune disorders may be autoimmune disorders or transplant rejection. Cardiovascular diseases such as arteriosclerosis may also be treated. The AGP-1 containing fusion proteins have increased biological activity compared to the soluble AGP-1 proteins used in prior art therapies
                                                                                                                                                                 Human; AGP-1; type II transmembrane protein; cytostatic; antiviral; antiinflammatory; hepatotropic; antiarteriosclerotic; anti-HIV; HIV; human immunodeficiency virus; apoptosis; proliferative disorder; cancer; hepatitis; acquired immunodeficiency syndrome; AIDS; autoimmune disorder; transplant rejection; cardiovascular disease; arteriosclerosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NWYVDGVEVHNVKTKPREEQYNSTYRVVSVLTVLHQNWMNGKEYKCKVSNKALPAPIEKT 120

                                                                                      of lytic bone disease or multiple myeloma. Also the method can be used for preventing metastasis of cancer to bone or osteosclerotic bone metastasis. The method comprises administering an OPG (osteoprotegrin) polypeptide or OPG fusion protein. The OPG proteins (see AAB80898-AAB80905) can inhibit formation of osteoclasts (and thus bone resorption) by blocking differentiation from monocytes/macrophage precursors. The present sequence is the hings. CH2 and CH3 regions of human IgGgammal. This sequence can be used to generate fusion proteins of OPG and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to a method for the prevention or treatment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                 immunoglobulin, for use in the present invention. The generated fusion proteins can exhibit increased circulating half-lives and slower clearance times, thereby providing a more sustained activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NWYVDGVEVHNVKTKPREEQYNSTYRVVSVLTVLHQNWMNGKEYKCKVSNKALPAPIEKT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The patent discloses fusion protein comprising human osteoprotegerin (OPG) protein fused by linker to human 1gG1 Pc portion. OPG negatively regulates formation of osteoclasts in vitro and in vivo. It blocks the differentiation of osteoclasts from monocyte or macrophage precursors and the reabsorption of bone. The OPG-Pc fusion protein is administered for the treatment of bone loss resulting from osteoporosis, Paget's disease, osteomyelitis, hyperalcaemia, osteopenia associated with surgery or steroid administration, osteonecrosis, bone loss due to rheumatoid arthritis, periodontal bone loss, osteolytic metastasis and/or prosthetic loosening. The present sequence is partial human immunoglobulin G (Ig G) in protein comprising the hinge and heavy chain constant regions CH2 and

The invention relates to a method for increasing and maintaining
chaematocrit in a mammal. The method comprises administering a
chaematocrit in a mammal. The method comprises administering a
composition, less frequently than an equivalent molar amount of and at a
composition, less frequently than an equivalent molar amount of and at a
comparable target haematocrit. Epo is a glycoptotein hormone necessary
comparable target haematocrit. Epo is a glycoptotein hormone necessary
comparable target haematocrit in a mammal suffering from anaemia
associated with a decline or loss of kidney function, myelosuppressive
therapy comprising chemotherapeutic or anti-viral drugs or associated
with excessive blood loss during surgical procedures, and in cancer
condition. The present sequence is human immunoglobulin G (1gG) gamma 1
constant heavy chain (CH2, CH3) hinge region used to construct Epo
hyperglycosylated analogue fusion protein

```
The invention relates to a compound comprising an immunoglobulin (Ig)
heavy chain constant region or its fragment that retains the ability to
bind an Fo receptor linked by a linker group or a direct bond to a
c peptide capable of binding an amyloidogenic protein. The invention is
c useful for clearing an amyloidogenic protein The invention is
c useful for clearing an amyloidogenic protein The invention is
c transthyretin (TTR), prion protein (PPP), islet amyloid, polypeptide
(TAPP), atrial natriuretic factor (AMP), kappa light chain, lambda light
(TAPP), atrial natriuretic factor (AMP), kappa light chain, lambda light
c (TAPP), atrial natriuretic factor (AMP), kappa light chain, lambda light
c (TAPP), atrial natriuretic factor (AMP), kappa light chain, lambda light
c chain, amyloid A, procalcitonin, cystatin C, beta2-microglobulin, ApoA-I,
c gelsolin, calcitonin, fibrinogen, Huntington, alpha-synocher such
as Alzheimer & disease and spongiform encephalopathy. Disorders treatable
as Alzheimer, disease and spongiform encephalopathy in cows and
c lysolated those caused or characterised by deposits of TTR (eg. familial
amyloid cardiomyopathy), PPP (eg. spongiform encephalopathy in cows and
c creutzfeldt-Jacob disease (CJ) and Gerstmann-Straussler-Scheinker
syndrome (GSS) in humans), IAPP (eg. insulinoma, adult onset diabetes),
C (eg. hereditary non-neuropathic systemic amyloidosis), Gelsolin (eg.
c diopathic amyloidosis of Finnish type), Fibrinogen (eg. hereditary renal
amyloidosis), Lysozyme (eg. hereditary systemic amyloidosis). Other
examples of amyloidosis of Finnish type), Fibrinogen (eg. hereditary renal
amyloidosis), Lysozyme (eg. hereditary systemic amyloidosis).
C used in the exemplification of the invention
                                                                                                                                                                                                    Human, amyloidogenic protein, Alzheimer's disease, Huntington's disease, spongiform encephalopathy, familial amyloid cardiomyopathy; amyloidosis, Gerstmann-Straussler-Scheinker syndrome; spongiform encephalopathy, GSS; Creutzfeldt-Jacob disease; insulinoma; diabetes; body myocytis; myeloma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel therapeutic agent useful for treating an amyloidogenic disorder, e.g. Alzheimer's disease, comprises an immunoglobulin heavy chain constant region linked to a peptide capable of binding amyloidogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   97.2%; Score 1225; DB 5; Length 232; 97.0%; Pred. The invention relates to a compound (I) binding to tissue factor (TF).

The compound (I) has the formula A-(LM)-C, where A is a FVIIa polypeptide, LM is an optional linker group, C comprises an optional linker group, C comprises an optional linker group, C comprises an endiated activated factor domain, and (I) binds to TF. (I) inhibits TF-medicament, and for the manufacture of a medicament for preventing or treating disease or disorder associated with pathophysiological TF activity. The disease or disorder associated with pathophysiological TF activity are deep venous thrombosis, arterial thrombosis, post surgical thrombosis, coronary artery bypass graft (CABG), percutaneous transdermal coronary angioplastry (PTGA), stroke, cancer, tumor metastasis, angiogenesis, ischemia/reperfusion, rheumatoid arthritis, thrombolysis, angiogenesis, ischemia/reperfusion, rheumatoid arthritis, thrombolysis, andiogenesis, ischemia/reperfusion, septic shock, septic andiogenesis and restenoses following angioplastry, acute and chronic indications such as inflammation, septic shock, septicemia, hypotension, adult respiratory distress syndrome (ARDS), disseminated intravascular cadult respiratory distress syndrome (ARDS), disseminated intravascular cagulopathy (DIC), pulmonary embolism, platelet deposition, myocardial infarction, or prophylactic treatment of mammals with atherosclerotic vessels at risk for thrombosis. The present sequence represente the Fc domain fragment of human immunoglobulin GI (1961).

(HUEPD), a peptide linker, and a human IgG Fc variant, is new.

(HUEPD), a peptide linker, and a human IgG Fc variant, is new.

(HUEPD), a peptide linker, and a human IgG Fc variant, is new.

(INDEPRINENT CLAIMS are also included for the following: a chinese hamster ovary (CHO)-derived cell line producing the HUEPO-L-VFC fusion procein in its growth medium in excess of 10 kmicro;g per million cells in a 24 hour period; an entend for making a recombinant fusion protein comprising HUEPO, a flexible peptide linker, and a human IgG Fc variant. Preferred protein: The peptide linker containing 20 or fewer amino acids is present between HUEPO and the human IgG Fc variant, alanine, and threonine. The human IgG Fc variant, serine, alanine, and threonine. The human IgG Fc variant, serine, serine, alanine, and threonine. The human IgG Fc variant comprises a hinge, CH2, and CH3 domains of human IgG Vaith pro311Ser mutations comprising 417 amino acids (SEQ ID NO. 18).

20). It further comprises a hinge, CH2, and CH3 domains of human IgG L with Leu234Val, Leu235Ala mutations comprising 437 amino acids (SEQ ID NO. 22). The HUEPO-L-VFC fusion protein exhibits in vitro biological activity similar to or higher than that of rHuEPO on a molar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New recombinant HuEPO-L-vFc fusion protein comprises human erythropoietin (HuEPO), a peptide linker, and a human IgG Fc variant, useful for treating chronic anemia due to renal diseases, cancer chemotherapy, or rheumatoid arthritis.

                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a novel purified polypeptide comprising any of SEQ ID NOS: 3, 7, 9, 11, 45 or 88, or an amino acid sequence that is 95% or more identical to the amino acid sequences and which includes an immunoglobulin like domain structure. The polypeptide of the invention activities and is a spleen-expressed (SERS) polypeptide. The methods and compositions of the present invention may useful for modulating lymphocyte activation and the immune response in a variety of conditions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            including autolumnunity, cancer, transplant rejection and inflammation. Such modulation may be achieved via the use of gene therapy. The current sequence is that of the human spleen expressed (SPEX) receptor-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 EPKSCDKTHTCPPCPAPELLGGPSVFLFPPKPKDTLMISRTPEVTCVVVDVSHEDPEVKF
